

# Neptune's Harvest

**Neptune's Harvest Organic Fertilizer** is made from fresh-caught North Atlantic fish right on the docks of Gloucester, MA. Unlike a fish emulsion, Neptune's Harvest fertilizers are produced using a unique cold process. The nitrogen in Neptune's Harvest fish fertilizer is derived from fish protein in the form of amino acids which slowly break down into basic nitrogen compounds in the soil. **Neptune's Harvest does no biological damage to the soil and promotes the growth of beneficial bacteria, making the soil less compact and better able to drain, yet hold moisture for plant use as needed.**

- Promotes growth of beneficial bacteria
- Builds sugar in plants
- Works as a compost enhancer
- Speeds up soil microbe development
- Doesn't burn plants or their roots
- Enhances nitrogen in plants
- Results in more blooms
- 100% natural

Filtered through a 150 micron screen, ensuring easy application with virtually all irrigation sprayer systems.

Corn treated with Neptune's Harvest (on right)

Higher soybean yields in New York

Healthier soil and improved pasture in Alabama

Larger, healthier sweet potatoes in Massachusetts

*"I have been growing giant pumpkins and watermelons for the past 15 years, and Neptune's Harvest has been part of our fertilizer program from the very beginning. We use it once a week from start to finish. Our plants maintained that healthy green look even through the worst heat of the summer. This year, with the help of your product, we were able to set the Ohio State record for watermelons at 270½ pounds." Bill – Ohio*

*"I believe that foliar spraying soybeans with Neptune's Harvest gives you three major benefits: 1) Larger and greener leaves; 2) A healthy plant; and 3) Higher test weight. My beans, regardless of the weather, have weighed 57 pounds to the bushel. I feel your fish fertilizer is well worth the cost." Gary – New York*
