

# Super Ag Adjuvant/Extract

**Super Ag** is a new, ecologically friendly **yield and crop enhancer** that promotes plant health, building healthier soils and crops along with stronger plants, higher yields, and most importantly, bigger profits. This is **not** a fertilizer; it is a concentrate of enzymes that work within the cell structure to produce more vigorous and healthier crops. **Super concentrated—only 1/10 ounce per acre needed!** Best used as a surfactant for products and chemicals. Works like no other product on the market today. Approved by the U.S. Food and Drug Administration Title 21 CFR as a natural food adjuvant/food grade extract.

- Improves photosynthesis
- Improves root development
- Strengthens plants and improves disease and pest resistance
- Stimulates plant metabolism
- Creates healthier plants

## Recent performance as experienced by growers:

- Used alone: saw record increases on many crops, including alfalfa, corn, soybeans, other bean crops, other grain crops, sunflowers, and canola
- Used with Lithovit: saw dramatic yield increases for a wide range of crops

Super Ag is effective against Goss's Wilt and a wide variety of other diseases. On the left: corn treated with Super Ag. On the right, untreated, infected corn.

Goss's Wilt, Bacterial Wilt and Leaf Blight have been described as epidemics, affecting yields in nearly every corn-growing area of the country. Super Ag has been tested by a number of farmers who reported success.
